

MEDIUM-TERM BUDGET POLICY STATEMENT

Item A-F (23-2018) CM 24/5/2018	REVIEWED INTEGRATED DEVELOPMENT PLAN (IDP), MEDIUM - TERM REVENUE AND EXPENDITURE FRAME WORK (MTREF) AND BUILT ENVIRONMENT PERFORMANCE PLAN (BEPP): 2018/2019 TO 2020/2021
------------------------------------	--

Resolved:

5. That to guide the implementation of the municipality's annual budget, the Council of the City of Ekurhuleni **APPROVES** the policies as set out in the following Annexures of this document.

Annexure D1	Medium-term Budget Policy Statement (reviewed)
Annexure D2	Pricing Policy Statement (reviewed)
Annexure D3	Property Rates Policy (reviewed)
Annexure D4	Provision of Free Basic Electricity Policy (reviewed) & Provision of Free Basic Water Supply Services Policy (reviewed)
Annexure D5	Waste Management Services Tariff Policy (reviewed)
Annexure D6	Consumer Deposit Policy (reviewed)
Annexure D7	Indigent Policy (reviewed)
Annexure D8	Credit Control & Debt Collection Policy (reviewed)
Annexure D9	Provision for Doubtful Debtors and Debtors Write Off (reviewed)
Annexure D10	Budget Implementation and Monitoring Policy (reviewed)
Annexure D11	Municipal Entity Financial Support Policy (reviewed)
Annexure D12	Accounting Policy (reviewed)
Annexure D13	Electricity Metering for Residential and business Customers (reviewed)
Annexure D14	Policy for the Vending of Pre-Paid Electricity (reviewed)
Annexure D15	Policy for Correction of Meter Reading and Billing Data (reviewed)
Annexure D16	Electricity Tariff policy (reviewed)
Annexure D17	Virement Policy (reviewed)
Annexure D18	Consumer Agreement Policy (remains unchanged)
Annexure D19	Supply Chain Management Policy (remains unchanged)
Annexure D20	Treasury Policy (new – Consolidation of various policies)
Annexure D21	Allocation for Grants-in-Aid Policy (new)

1. PRESENTATION OF GROUP ANNUAL FINANCIAL STATEMENTS

Basis of preparation

These annual financial statements were prepared in accordance with Standards of Generally Recognised Accounting Practice (GRAP), issued by the Accounting Standards Board in accordance with Section 122(3) of the Municipal Finance Management Act, (Act No 56 of 2003).

The annual financial statements were prepared on the accrual basis of accounting and incorporate the historical cost conventions as the basis of measurement, except where specified otherwise.

In the absence of an issued and effective Standard of GRAP, accounting policies for material transactions, events or conditions were developed in accordance with paragraphs 8, 10 and 11 of GRAP 3 as read with Directive 5.

Assets, liabilities, revenues and expenses were not offset, except where offsetting is either required or permitted by a Standard of GRAP.

The principle accounting policies, applied in the preparation of these annual financial statements, are set out below. These accounting policies are consistent with those applied in the preparation of the prior year annual financial statements, unless specified otherwise. Details of any changes in the accounting policies are provided in the note "Changes in accounting policy".

1.1 SIGNIFICANT JUDGEMENTS AND SOURCES OF ESTIMATION UNCERTAINTY

In the process of applying the entity's accounting policies, management has made the following significant accounting judgements, estimates and assumptions, which have the most significant effect on the amounts recognised in the financial statements:

• Operating lease commitments – entity as lessor or lessee

Leases where risks and rewards of ownership are not transferred to the lessee are classified as operating leases. Payments received or paid under operating leases are recognised in the statement of financial performance on a straight-line basis over the period of the lease.

• Pension and other post – employment benefits

The cost of defined-benefit pension plans and other employment medical benefits is determined using actuarial valuations. The actuarial valuation involves making assumptions about discount rates, expected rates of return on assets, future salary increases, mortality rates and future pension increases. Due to the long-term nature of these plans, such estimates are subject to significant uncertainty.

• Impairment of receivables

The calculation in respect of the impairment of receivables is based on an assessment of the extent to which debtors have defaulted on payments already due, and an assessment of their ability to make payments. This was performed on an individual basis as well as per service-identifiable categories across all debtor classes.

- **Impairment of property, plant and equipment**

The calculation in respect of the impairment of property, plant and equipment is based on an assessment of the extent to which the recoverable amount of the asset has declined below the carrying amount. This was performed across all classes of property, plant and equipment.

- **Provisions, contingent liabilities and contingent assets**

Management's judgement is required when recognising and measuring provisions, as well as when measuring contingent liabilities and contingent assets. Provisions are discounted where the effect of discounting is material, using cost of capital.

- **Useful lives of property, plant and equipment and Investment property held at cost**

The useful lives of assets are based on management's estimates. Management considers the impact of technology, service requirements and required return on assets to determine the optimum useful-life expectation, where appropriate. The estimated residual values of assets are also based on management's judgement on whether the assets will be sold or used to the end of their useful lives, and what their condition will be at that time.

- **Traffic Fines**

Fines are recognised as revenue when the receivable meets the definition of an asset and satisfies the criteria for recognition as an asset. Assets arising from fines are measured at the best estimate of the inflow of resources to the entity.

- **Fair value estimation**

The fair value of financial instruments traded in active markets (such as trading and available-for-sale securities) is based on quoted market prices at the end of the reporting period.

- **Budget information**

A difference of 5% or more between budget and actual amounts is regarded as material. All material differences are explained in the notes to the annual financial statements.

The accounting policies applied are consistent with those used to present the previous year's financial statements, unless explicitly stated otherwise.

1.2 PRESENTATION OF CURRENCY

These annual financial statements are presented in South African Rand, which is the functional currency of the entity.

1.3 CONSOLIDATION

Basis of consolidation

Consolidated group annual financial statements are the group annual financial statements of the economic entity presented as those of a single entity.

The consolidated group annual financial statements incorporate the group annual financial statements of the controlling entity and all controlled entity, which are controlled by the controlling entity.

Control exists when the controlling entity has the power to govern the financial and operating policies of another entity so as to obtain benefits from its activities.

The results of controlled entities, are included in the consolidated group annual financial statements from the effective date of acquisition or date when control commences to the effective date of disposal or date when control ceases. The difference between the proceeds from the disposal of the controlled entity and its carrying amount as of the date of disposal, including the cumulative amount of any exchange differences that relate to the controlled entity recognised in net assets in accordance with the Standard of GRAP on The Effects of Changes in Foreign Exchange Rates, is recognised in the consolidated statement of financial performance as the surplus or deficit on the disposal of the controlled entity.

An investment in an entity is accounted for in accordance with the accounting policy on Financial Instruments from the date that it ceases to be a controlled entity, unless it becomes an associate or a jointly controlled entity, in which case it is accounted for as such. The carrying amount of the investment at the date that the entity ceases to be a controlled entity is regarded as the fair value on initial recognition of a financial asset in accordance with the accounting policy on Financial Instruments.

The group annual financial statements of the controlling entity and its controlled entities used in the preparation of the consolidated group annual financial statements are prepared as of the same reporting date.

Adjustments are made when necessary to the group annual financial statements of the controlled entities to bring their accounting policies in line with those of the controlling entity.

All intra-entity transactions, balances, revenues and expenses are eliminated in full on consolidation.

Non-controlling interests in the net assets of the entity are identified and recognised separately from the controlling entity's interest therein, and are recognised within net assets. Losses applicable to the minority in a consolidated controlled entity may exceed the non-controlling interest in the controlled entity's net assets. The excess, and any further losses applicable to the minority, are allocated against the majority interest except to the extent that the minority has a binding obligation to, and is able to, make an additional investment to cover the losses. If the controlled entity subsequently reports surpluses, such surpluses are allocated to the majority interest until the minority's share of losses previously absorbed by the majority has been recovered.

Non-controlling interests in the surplus or deficit of the entity is separately disclosed.

1.4 INVESTMENT PROPERTY

Investment property includes property (land or a building, or part of a building, or both land and buildings held under a finance lease) held to earn rentals and/or for capital appreciation, rather than held to meet service delivery objectives, the production or supply of goods or services, or the sale of an asset in the ordinary course of operations.

Investment property is recognised as an asset when, and only when, it is probable that the future economic benefits or service potential that are associated with the investment property will flow to the enterprise, and the cost or fair value of the investment property can be measured reliably.

At initial recognition, the entity measures investment property at cost including transaction costs once it meets the definition of investment property. However, where an investment property was acquired through a non-exchange transaction (i.e. where it acquired the

investment property for no or a nominal value), its cost is its fair value as at the date of acquisition.

Cost model

Investment property is subsequently measured using the cost model. Under the cost model, investment property is carried at cost less any accumulated depreciation and any accumulated impairment losses.

Depreciation is calculated on the depreciable amount, using the straight-line method over the estimated useful lives of the assets.

Components of assets that are significant in relation to the whole asset and that have different useful lives are depreciated separately. The annual depreciation rates are based on the following estimated average asset lives:

Depreciation is provided to write down the cost by equal instalments over the useful life of the property, which is as follows:

Item	Useful life
Property - land	indefinite
Property - buildings	50 - 60 years

Investment property is derecognised on disposal or when the investment property is permanently withdrawn from use and no future economic benefits or service potential are expected from its disposal.

Gains or losses arising from the retirement or disposal of investment property is the difference between the net disposal proceeds and the carrying amount of the asset and is recognised in surplus or deficit in the period of retirement or disposal.

1.5 PROPERTY, PLANT AND EQUIPMENT (PPE)

Property, plant and equipment are tangible non-current assets (including infrastructure assets) that are held for use in the production or supply of goods or services, rental to others, or for administrative purposes, and are expected to be used during more than one period.

The cost of an item of property, plant and equipment is recognised as an asset when:

- it is probable that future economic benefits or service potential associated with the item will flow to the entity and
- the cost or the fair value of the item can be measured reliably.

Property, plant and equipment is initially measured at cost. The cost of an item of property, plant and equipment is the purchase price and other costs attributable to bring the asset to the location and condition necessary for it to be capable of operating in the manner intended by management. Trade discounts and rebates are deducted in arriving at the cost. Cost also includes initial estimate of the costs of dismantling and removing the asset and restoring the site on which it is located. Recognition of costs in the carrying amount of an item of property, plant and equipment ceases when the item is in the location and condition necessary for it to be capable of operating in the manner intended by management. Servitudes that are acquired with the relevant infrastructure items are capitalised with the relating infrastructure asset when it is an integral part of the asset.

Work in progress represents capital expenditure incurred on projects/assets under construction not yet completed nor ready for use at period end.

Property, plant and equipment are subsequently measured at cost, less accumulated depreciation and accumulated impairment losses. Where property, plant and equipment are acquired through non-exchange transactions, the cost is deemed to be the item's fair value on the date of acquisition. The cost of an item of property, plant and equipment acquired in exchange for a non-monetary asset or monetary assets, or a combination of monetary and non-monetary assets was measured at its fair value. If the acquired item could not be measured at its fair value, its cost was measured at the carrying amount of the asset given up.

Subsequent cost is capitalised when the recognition and measurement criteria of an asset are met.

The entity maintains and acquires assets to provide a social service to the community. The useful lives and economic lives of these assets are equal and consequently no residual values are determined.

The entity depreciates separately each part of an item of property, plant and equipment that has a cost that is significant in relation to the total cost of the item. Costs of replacing parts are capitalised and the existing parts being replaced are derecognised. Depreciation is calculated at cost, using the straight-line method, over the estimated useful lives of the assets. Depreciation starts when the asset is available for use. Work in progress is not depreciated.

The depreciation rates are based on the following estimated useful lives:

Item	Average useful life
Land	Indefinite

Infrastructure

• Roads and storm water	2 - 100 years
• Pedestrian malls	10 - 60 years
• Electricity	3 - 100 years
• Water	3 - 100 years
• Sewer	3 - 100 years
• Housing	80 years
• Solid Waste	5 - 100 years
• Servitudes	Indefinite
• ICT	5 - 50 years
• Waste Water Purification Works	4 - 82 years

Community

• Buildings	14 - 80 years
• Recreational facilities	10 - 80 years
• Security	5 - 15 years
• Landfill sites	10 - 80 years

Other property, plant and equipment

• Furniture and fittings	3 - 33 years
--------------------------	--------------

• Water craft	15 years
• Office equipment	3 - 35 years
• Specialised plant and equipment	10 - 26 years
• Other items of plant and equipment	2 - 29 years
• Buildings	20 - 80 years
• Specialised vehicles	3 - 20 years
• Other vehicles	3 - 28 years

The asset management policy contains the details of the components and their specific useful life estimates.

The residual value, the useful life and the depreciation method of PPE are reviewed at least at every reporting date.

At each reporting date all items of PPE are reviewed for any indication that it may be impaired. An impairment exists when an assets carrying amount is greater than its recoverable amount. The recoverable amount of an asset or cash generating unit is the higher of its fair value less costs to sell and its value in use. If there is an indication of impairment, the assets' recoverable amount is calculated. An impairment loss is recognised in the Statement of Financial Performance and the depreciation charge relating to the asset is adjusted for future periods.

Items of Property, plant and equipment are derecognised when the asset is disposed of or when there are no further economic benefits or service potential expected from the use of the asset. The gain or loss arising on the disposal or retirement of an item of property, plant and equipment is determined as the difference between the sales proceeds and the carrying value and is recognised in the Statement of Financial Performance.

1.6 INTANGIBLE ASSETS

An asset is identified as an intangible asset when it is capable of being separated or divided from an entity and sold, transferred, licensed, rented or exchanged, either individually or together with a related contract, assets or liability; or arises from contractual rights or other legal rights, regardless whether those rights are transferable or separate from the entity or from other rights and obligations.

An intangible asset is recognised when it is probable that the expected future economic benefits or service potential that are attributable to the asset will flow to the entity; and the cost or fair value of the asset can be measured reliably.

Intangible assets are initially recognised at cost. An intangible asset acquired through a non-exchange transaction, the cost shall be its fair value as at the date of acquisition. Expenditure on research (or on the research phase of an internal project) is recognised as an expense when it is incurred.

Intangible assets are subsequently measured at cost less any accumulated amortisation and any impairment losses.

An intangible asset is regarded as having an indefinite useful life when, based on all relevant factors, there is no foreseeable limit to the period over which the asset is expected to generate net cash inflows or service potential. Amortisation is not provided for these

intangible assets, but they are tested for impairment annually and whenever there is an indication that the asset may be impaired. For all other intangible assets amortisation is provided on a straight line basis over their useful life.

The amortisation period and the amortisation method for intangible assets are reviewed at each reporting date.

Intangible assets are derecognised on disposal, or when no future economic benefits are expected from its use or disposal. Internally generated brands, mastheads, publishing titles, customer lists and items similar in substance are not recognised as intangible assets.

Amortisation is provided to write down the intangible assets, on a straight line basis, to their residual values as follows:

Item	Average Useful life
Computer software	2 - 23 years

The gain or loss arising from the derecognition of an intangible asset is included in surplus or deficit when the asset is derecognised.

1.7 HERITAGE ASSETS

A heritage asset is as an asset that has a cultural, environmental, historical, natural, scientific, technological or artistic significance, and is held indefinitely for the benefit of present and future generations.

The entity recognises a heritage asset as an asset if it is probable that future economic benefits or service potential associated with the asset will flow to the entity, and the cost or fair value of the asset can be measured reliably.

Heritage assets are measured at cost. Where a heritage asset is acquired through a non-exchange transaction, its cost is measured at its fair value as at the date of acquisition. The cost of a purchased heritage asset comprises:

- its purchase price, including import duties and non-refundable purchase taxes, after deducting trade discounts and rebates; and
- any costs directly attributable to bringing the heritage asset to the location and condition necessary for it to be capable of operating in the manner intended by management

Heritage assets are subsequently measured at cost, less accumulated impairment losses. Where a heritage asset is acquired through a non-exchange transaction, its cost is deemed to be its fair value as at the date of acquisition.

Transfers to heritage assets are made only when the asset meets the definition of a heritage asset and transfers from heritage assets are made only when the asset no longer meets the definition of a heritage asset. Transfers to and from heritage assets are done at the carrying amount of the assets transferred at the date of transfer.

The entity assesses at each reporting date whether there is an indication that it may be impaired. If any such indication exists, the entity estimates the recoverable amount or the recoverable service amount of the heritage asset.

Most heritage assets have an indefinite useful life as they are to be preserved for current and future generations and might appreciate in value over time due to their cultural, environmental, historical, natural, scientific, technological and/or artistic significance. Based on this analysis, there is no finite limit to the period over which a heritage asset is expected to be held by the entity. The useful life of the heritage asset is therefore likely to be indefinite or the annual depreciation is likely to be immaterial.

The entity derecognises heritage asset on disposal, or when no future economic benefits or service potential are expected from its use or disposal. The gain or loss arising from the derecognition of a heritage asset is included in surplus or deficit when the item is derecognised.

1.8 INVESTMENTS IN CONTROLLED ENTITIES

Municipal controlled entities are those entities which the Entity owns or over whose financial and operating policies it has the power to exercise beneficial control.

In the entity's separate annual financial statements, investments in controlled entities are carried at cost less any accumulated impairment.

1.9 FINANCIAL INSTRUMENTS

a) Financial instruments at amortised cost are non-derivative financial assets or non-derivative financial liabilities that have fixed or determinable payments, excluding those instruments that:

- (i) the entity designates at fair value at initial recognition or
- (ii) are held for trading.

b) Financial instruments at cost are investments in residual interests that do not have a quoted market price in an active market, and whose fair value cannot be reliably measured.

c) Financial instruments at fair value comprise financial assets or financial liabilities that are:

- (i) derivatives;
- (ii) combined instruments that are designated at fair value;
- (iii) instruments held for trading. A financial instrument is held for trading if:
 - (1) it is acquired or incurred principally for the purpose of selling or repurchasing it in the near-term; or
 - (2) on initial recognition it is part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short term profit-taking;
- (iv) non-derivative financial assets or financial liabilities with fixed or determinable payments that are designated at fair value at initial recognition; and
- (v) financial instruments that do not meet the definition of financial instruments at amortised cost or financial instruments at cost.

The entity has the following types of financial assets (classes and category) as reflected on the face of the statement of financial position or in the notes thereto:

Class	Category
Other Investments	Financial asset measured at amortised cost
Other receivables from exchange transactions	Financial asset measured at amortised cost
Receivables from non-exchange transactions (taxes & transfers)	Financial asset measured at amortised cost
Consumer debtors	Financial asset measured at amortised cost
Cash and cash equivalents	Financial asset measured at amortised cost
Long-term receivables	Financial asset measured at amortised cost
Other Investments (unlisted shares)	Financial asset measured at cost
Other investments	Financial asset measured at fair value

The entity has the following types of financial liabilities (classes and category) as reflected on the face of the statement of financial position or in the notes thereto:

Class	Category
Long-term liabilities	Financial liability measured at amortised cost
Trade and other payables from exchange transactions	Financial liability measured at amortised cost
Consumer deposits	Financial liability measured at amortised
Finance lease obligation	Financial liability measured at amortised

Initial recognition

The entity recognises a financial asset or a financial liability in its statement of financial position when the entity becomes a party to the contractual provisions of the instrument.

The entity recognises financial assets using trade date accounting.

Initial measurement of financial assets and financial liabilities

The entity measures a financial asset and financial liability initially at its fair value plus, in the case of a financial asset or a financial liability not subsequently measured at fair value, transaction costs that are directly attributable to the acquisition or issue of the financial asset or financial liability.

The entity first assesses whether the substance of a concessionary loan is in fact a loan. On initial recognition, the entity analyses a concessionary loan into its component parts and accounts for each component separately. The entity accounts for that part of a concessionary loan that is:

- a social benefit in accordance with the Framework for the Preparation and Presentation of Financial Statements, where it is the issuer of the loan; or
- non-exchange revenue, in accordance with the Standard of GRAP on Revenue from Non-Exchange Transactions (Taxes and Transfers), where it is the recipient of the loan.

Subsequent measurement of financial assets and financial liabilities

The entity measures all financial assets and financial liabilities after initial recognition using the following categories:

- Financial instruments at fair value.
- Financial instruments at amortised cost.
- Financial instruments at cost.

All financial assets measured at amortised cost, or cost, are subject to an impairment review.

Fair value measurement considerations

The best evidence of fair value is quoted prices in an active market. If the market for a financial instrument is not active, the entity establishes fair value by using a valuation technique.

Gains and losses

A gain or loss arising from a change in the fair value of a financial asset measured at fair value is recognised in surplus or deficit.

For financial assets and financial liabilities measured at amortised cost or cost, a gain or loss is recognised in surplus or deficit when the financial asset or financial liability is derecognised or impaired, or through the amortisation process.

Impairment and uncollectibility of financial assets

The entity assesses at the end of each reporting period whether there is any objective evidence that a financial asset or of financial assets is impaired.

a) Financial assets measured at amortised cost:

If there is objective evidence that an impairment loss on financial assets measured at amortised cost has been incurred, the amount of the loss is measured as the difference between the asset's carrying amount and the present value of estimated future cash flows (excluding future credit losses that have not been incurred) discounted at the financial asset's original effective interest rate. The carrying amount of the asset is reduced directly OR through the use of an allowance account. The amount of the loss is recognised in surplus or deficit.

If, in a subsequent period, the amount of the impairment loss decreases and the decrease can be related objectively to an event occurring after the impairment was recognised, the previously recognised impairment loss is reversed directly OR by adjusting an allowance account. The reversal does not result in a carrying amount of the financial asset that exceeds what the amortised cost would have been had the impairment not been recognised at the date the impairment is reversed. The amount of the reversal is recognised in surplus or deficit.

b) Financial assets measured at cost:

If there is objective evidence that an impairment loss has been incurred on an investment in a residual interest that is not measured at fair value because its fair value cannot be measured reliably, the amount of the impairment loss is measured as the difference between the carrying amount of the financial asset and the present value of estimated future cash flows discounted at the current market rate of return for a similar financial asset. Such impairment losses are not reversed.

Derecognition**a) Financial assets**

The entity derecognises financial assets (or part of a financial assets) when the contractual rights to the cash flows from the financial asset expire, are settled or waived or when the entity has transferred all of the significant risks and rewards of ownership using trade date accounting.

On derecognition of a financial asset (or part of a financial asset), the difference between the carrying amount and the sum of the consideration received is recognised in surplus or deficit.

b) Financial liabilities

The entity removes a financial liability (or a part of a financial liability) from its statement of financial position when it is extinguished (when the obligation specified in the contract is discharged, cancelled, expires or waived).

The difference between the carrying amount of a financial liability (or part of a financial liability) extinguished or transferred to another party and the consideration paid, including any non-cash assets transferred or liabilities assumed, is recognised in surplus or deficit. Any liabilities that are waived, forgiven or assumed by another entity by way of a non-exchange transaction are accounted for in accordance with the Standard of GRAP on Revenue from Non-Exchange Transactions (Taxes and Transfers).

Presentation

Interest relating to a financial instrument or a component that is a financial liability is recognised as revenue or expense in surplus or deficit.

Dividends or similar distributions relating to a financial instrument or a component that is a financial liability is recognised as revenue or expense in surplus or deficit.

Losses and gains relating to a financial instrument or a component that is a financial liability is recognised as revenue or expense in surplus or deficit.

A financial asset and a financial liability are only offset and the net amount presented in the statement of financial position when the entity currently has a legally enforceable right to set off the recognised amounts and intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

In accounting for a transfer of a financial asset that does not qualify for derecognition, the entity does not offset the transferred asset and the associated liability.

1.10 INVENTORIES

Inventories comprise current assets held for sale, consumption or distribution during the ordinary course of business.

Inventories shall be recognised as an asset if, and only if,

- it is probable that future economic benefits or service potential associated with the item will flow to the entity; and
- the cost of the inventories can be measured reliably.

Inventories are initially recognised at cost. Cost generally refers to the purchase price, plus taxes, transport costs and any other costs in bringing the Inventories to their current location and condition. Where inventory is manufactured, constructed or produced, the cost includes the cost of labour, materials and overheads used during the manufacturing process.

Where inventory is acquired by the entity for no or nominal consideration (i.e. a non-exchange transaction), the cost is deemed to be equal to the fair value of the item on the date acquired.

Inventories, consisting of consumable stores, raw materials, work-in-progress and finished goods, are valued at the lower of cost and net realisable value unless they are to be distributed at no or nominal charge, in which case they are measured at the lower of cost and current replacement cost.

Unsold properties, distributed through a non-exchange transaction, are valued at lower of cost or the net replacement cost. Direct costs are accumulated for each separately identifiable development.

The carrying amount of inventories is recognised as an expense in the period that the inventory was sold, distributed, written off or consumed, unless that cost qualifies for capitalisation to the cost of another asset. The first-in-first-out method is the basis of allocating costs to inventories, except for water balance which is determined at weighted average cost based on the water volume in the network on hand.

Redundant and slow-moving inventories are identified and written down in this way. Inventories identified for write down/write off, but for which a council resolution, to authorise the write down/write off, has not yet been obtained, is provided for as a provision for obsolete stock. Differences arising on the valuation of inventory are recognised in the Statement of Financial Performance in the year in which they arose. The amount of any reversal of any write-down of inventories arising from an increase in net realisable value or current replacement cost is recognised as a reduction in the amount of inventories recognised as an expense in the period in which the reversal occurs.

1.11 EMPLOYEE BENEFITS

Short-term employee benefits

The cost of short-term employee benefits, (those payable within 12 months after the service is rendered, such as paid vacation leave and sick leave, bonuses, and non-monetary benefits such as medical care), are recognised in the period in which the service is rendered and are not discounted.

The expected cost of compensated absences is recognised as an expense as the employees render services that increase their entitlement or, in the case of non-accumulating absences, when the absence occurs.

The expected cost of surplus sharing and bonus payments is recognised as an expense when there is a legal or constructive obligation to make such payments as a result of past performance.

Retirement funds

The entity contributes to defined contribution and defined benefit funds. These funds are multi-employer funds.

Defined contribution plans

Payments to defined contribution retirement benefit plans are charged as an expense as they fall due.

Payments made to industry-managed (or state plans) retirement benefit schemes are dealt with as defined contribution plans where the entity's obligation under the schemes is equivalent to those arising in a defined contribution retirement benefit plan.

Defined benefit plans

For defined benefit plans the cost of providing the benefits is determined using the projected credit method.

Actuarial valuations are conducted on an annual basis by independent actuaries separately for each plan.

Past service costs are recognised immediately to the extent that the benefits are already vested, and are otherwise amortised on a straight line basis over the average period until the amended benefits become vested.

The amount recognised in the statement of financial position represents the present value of the defined benefit obligation, reduced by the fair value of plan assets (if any).

Any asset is limited to the present value of available refunds and reduction in future contributions to the plan.

The entity does not apply "defined benefit accounting" to the defined benefit funds to which it is a member, where these funds as classified in terms of GRAP 25 as multi-employer plans, as sufficient information is not available to apply the principles involved.

To the extent that a surplus or deficit in the place, based on available information, may affect the amount of future contributions, these are assessed. In the case of surpluses, no change is made in the rate of contributions. In the case of deficits, the entity will increase Contributions on a phased basis. To the extent that the full discounted value of obligations to the funds is not fully accounted for at year end, a contingent liability arises and is reported on accordingly.

Medical Aid: Continued Members

The entity provides post-retirement benefits by subsidising the medical aid contributions of certain retired staff. According to the rules of the medical aid funds, with which the entity is associated, a member (subject to the applicable conditions of service), on retirement, is entitled to remain a continued member of such medical aid fund, in which case the member is liable for the portion as determined by Council from time to time, of the medical aid membership fee, and the entity for the remaining portion.

1.12 PROVISIONS AND CONTINGENCIES

A provision is recognised when the entity has a present obligation (legal or constructive) as a result of a past event and it is probable that an outflow of resources embodying economic benefits or service potential will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation.

The entity does not recognise a contingent liability or contingent asset. A contingent liability is disclosed unless the possibility of an outflow of resources embodying economic benefits is remote. A contingent asset is disclosed where an inflow of economic benefits is probable.

The amount of a provision is the best estimate of the expenditure expected to be required to settle the present obligation at the reporting date. Where the effect of time value of money is material, the amount of a provision is the present value of the expenditures expected to be required to settle the obligation. The discount rate is a pre-tax rate that reflects current market assessments of the time value of money and the risks specific to the liability. Where discounting is used, the carrying amount of a provision increases in each period to reflect the passage of time. This increase is recognised as an interest expense.

Provisions are reviewed at each reporting date and adjusted to reflect the current best estimate. Provisions are reversed if it is no longer probable that an outflow of resources embodying economic benefits or service potential will be required, to settle the obligation.

A provision is used only for expenditures for which the provision was originally recognised.

a) Leave provision

Liabilities for annual leave are recognised as they accrue to employees. The liability is based on the total accrued leave days at year end, any unused leave days are forfeited six months after the end of leave cycle.

b) COID provision

The provision for COID pensions and medical aid liability is based on eligible members, their current age and their future life expectancy. Cash flows are projected on the basis of current pension payments escalated at 7.36% (2017: 7.36%) per annum over member's expected lives. Resulting cash flows have been discounted to Net Present Value applying a discount rate of 10.46% (2017: 10.46%).

c) Landfill rehabilitation provision

The Landfill Rehabilitation Provision is created for the rehabilitation of the current operational sites at the future estimated time of closure.

The value of the Provision is based on the expected future cost to rehabilitate the various sites discounted back to the balance sheet date at the cost of capital (time value of money), which is currently 10.46% (2017: 10.46%).

The entity has an obligation to rehabilitate these Landfill sites. The cost of such property includes the initial estimate of the costs of rehabilitating the land and restoring the site on which it is located, the obligation for which an entity incurs as a consequence of having used the property during a particular period for landfill purposes. The entity estimates the useful lives and make assumptions as to the useful lives of these assets, which influence the provision for future costs.

Changes in the measurement of the provision that result from changes in the estimated timing or amount of the outflow of resources embodying economic benefits or service potential required to settle the obligation, or a change in the discount rate, is accounted for as follows:

- a) subject to (b), changes in the liability are added to, or deducted from, the cost of the related asset in the current period;
- b) if a decrease in the liability exceeds the carrying amount of the asset, the excess is recognised immediately in surplus or deficit; and
- c) if the adjustment results in an addition to the cost of an asset, the entity considers whether this is an indication that the new carrying amount of the asset may not be fully recoverable. If it is such an indication, the asset is tested for impairment by estimating its recoverable amount, and any impairment loss is recognised in surplus or deficit.

The adjusted depreciable amount of the asset is depreciated over its useful life. Therefore, once the related asset has reached the end of its useful life, all subsequent changes in the liability is recognised in surplus or deficit as they occur.

The periodic unwinding of the discount is recognised in surplus or deficit as a finance cost as it occurs.

d) Workmen's compensation provision

The provision is for the unpaid periods, estimated in the latest return submitted to the compensation commissioner.

e) Long service awards provision

The entity offers various types of long service awards to its employees. The provision is to recognise the present value of the obligation as at the reporting date.

f) GMRF provision

The provision is for the entity's obligation to the Germiston Municipal Retirement Fund due to the entity failing to meet its obligation to contribute to the fund due to the required investment yield not being achieved.

g) Bonus provision

The provision is to provide for performance bonuses of the entity's section 57 employees and, independent contractors, where applicable.

1.13 IMPAIRMENT OF CASH-GENERATING ASSETS AND NON-CASH-GENERATING ASSETS

Cash-generating assets are those assets managed by the entity with the objective of generating a commercial return. When an asset is deployed in a manner consistent with that adopted by a profit-orientated entity, it generates a commercial return. Non-cash-generating assets are assets other than cash-generating assets.

Impairment is a loss in the future economic benefits or service potential of an asset, over and above the systematic recognition of the loss of the asset's future economic benefits or service potential through depreciation (amortisation).

The entity classifies all assets held with the primary objective of generating a commercial return as cash-generating assets. All other assets are classified as non-cash-generating assets.

Identification

When the carrying amount of a cash-generating asset exceeds its recoverable amount or when the carrying amount of a non-cash-generating asset exceeds its recoverable service amount, it is impaired.

The entity assesses at each reporting date whether there is any indication that an asset may be impaired. If any such indication exists, the entity estimates the recoverable amount or the recoverable service amount of the asset.

Irrespective of whether there is any indication of impairment, the entity also tests an intangible asset with an indefinite useful life or an intangible asset not yet available for use for impairment annually by comparing its carrying amount with its recoverable amount. This impairment test is performed at the same time every year. If an intangible asset was initially recognised during the current reporting period, that intangible asset was tested for impairment before the end of the current reporting period.

Value in use

Value in use of a cash-generating asset is the present value of the estimated future cash flows expected to be derived from the continuing use of an asset and from its disposal at the end of its useful life. Value in use of non-cash-generating assets is the present value of the non-cash-generating assets remaining service potential.

When estimating the value in use of a cash-generating asset, the entity estimates the future cash inflows and outflows to be derived from continuing use of the asset and from its ultimate disposal and the entity applies the appropriate discount rate to those future cash flows. The present value of the remaining service potential of a non-cash-generating assets is determined using the most appropriate between the following approaches:

- Depreciated replacement cost approach;
- Restoration cost approach;
- Service units' approach

Recognition and measurement

If the recoverable amount of an asset is less than its carrying amount, the carrying amount of the asset is reduced to its recoverable amount or recoverable service amount. This reduction is an impairment loss.

An impairment loss is recognised immediately in surplus or deficit.

When the amount estimated for an impairment loss is greater than the carrying amount of the asset to which it relates, the entity recognises a liability only to the extent that is a requirement in the Standard of GRAP.

After the recognition of an impairment loss, the depreciation (amortisation) charge for the asset is adjusted in future periods to allocate the asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

Reversal of impairment loss

The entity assesses at each reporting date whether there is any indication that an impairment loss recognised in prior periods for an asset may no longer exist or may have decreased. If any such indication exists, the entity estimates the recoverable amount or recoverable service amount of that asset.

An impairment loss recognised in prior periods for an asset is reversed if there has been a change in the estimates used to determine the asset's recoverable amount since the last impairment loss was recognised. The carrying amount of the asset is increased to its recoverable amount. The increase is a reversal of an impairment loss. The increased carrying amount of an asset attributable to a reversal of an impairment loss does not exceed the carrying amount that would have been determined (net of depreciation or amortisation) had no impairment loss been recognised for the asset in prior periods.

A reversal of an impairment loss for a cash-generating asset is recognised immediately in surplus or deficit.

After a reversal of an impairment loss is recognised, the depreciation (amortisation) charge for the asset is adjusted in future periods to allocate the asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

Redesignation

The redesignation of assets from a cash-generating asset to a non-cash-generating asset or from a non-cash-generating asset to a cash-generating asset only occur when there is clear evidence that such a redesignation is appropriate.

1.14 REVENUE FROM EXCHANGE TRANSACTIONS

Revenue is the gross inflows of economic benefits or service potential during the reporting period when those inflows result in increases in net assets, other than increases relating to contributions from owners

Revenue from exchange transactions refers to revenue that accrued to the entity directly in return for services rendered / goods sold, the value of which approximates the consideration received or receivable.

Revenue is recognised when it is probable that future economic benefits or service potential will flow to the entity and these benefits can be measured reliably.

Revenue is measured at the fair value of the consideration received or receivable.

When the inflow of cash or cash equivalents is deferred and the fair value of the consideration is less than the nominal amount of cash received or receivable, the arrangement effectively constitutes a financing transaction. The fair value of the consideration is determined by discounting all future receipts using an imputed rate of interest. The imputed rate of interest is the more clearly determinable of either:

- The prevailing rate for a similar instrument of an issuer with a similar credit rating; or
- A rate of interest that discounts the nominal amount of the instrument to the current cash sales price of the goods or services.

The difference between the fair value and the nominal amount of the consideration is recognised as interest revenue.

Service charges relating to electricity and water are based on consumption. Meters are read on a periodic basis and revenue is recognised when invoiced. Provisional estimates of consumption are made monthly when meter readings have not been performed and are based on the consumption history. The provisional estimates of consumption are recognised as revenue when invoiced. Adjustments to provisional estimates of consumption are made in the invoicing period when meters have been read. These adjustments are recognised as revenue in the invoicing period. There are areas within the entity where an un-metered water tariff is applied based on estimated consumption as per promulgated tariffs. Revenue for these is recognised when invoiced.

Service charges relating to refuse removal are recognised on a monthly basis in arrears by applying the approved tariff to each property. Tariffs are determined per category of property size, and are levied monthly.

Service charges from sewerage and sanitation are based on the number of sewerage connections on each developed property using the tariffs approved from Council and are levied monthly.

Interest revenue is recognised using the effective interest rate method.

Revenue from the rental of facilities and equipment is recognised on a straight-line basis over the term of the lease agreement.

Revenue arising from the application of the approved tariff of charges is recognised when the relevant service is rendered by applying the relevant gazetted tariff. This includes the issuing of licences and permits.

Income earned on agency services is recognised on a monthly basis once the income collected on behalf of agents has been quantified. The income recognised is in terms of the agency agreement.

Dividends are recognised when the entity's right to receive payment is established.

Revenue from the sale of goods is recognised when the following conditions have been satisfied:

- The entity has transferred to the buyer the significant risks and rewards of ownership.
- The entity retains neither continuing managerial involvement to the degree usually associated with ownership nor effective control over the goods sold.
- The amount of revenue can be measured reliably.
- It is probable that the economic benefits or service potential associated with the transaction will flow to the entity.
- The costs incurred or to be incurred in respect of the transaction can be measured reliably.

1.15 REVENUE FROM NON-EXCHANGE TRANSACTIONS

Non-exchange transactions are defined as transactions where the entity receives value from another entity without directly giving approximately equal value in exchange.

An inflow of resources from a non-exchange transaction recognised as an asset is recognised as revenue, except to the extent that a liability is also recognised in respect of the same inflow. As the entity satisfies a present obligation recognised as a liability in respect of an inflow of resources from a non-exchange transaction recognised as an asset, it reduces the carrying amount of the liability recognised and recognises an amount of revenue equal to that reduction.

Revenue from a non-exchange transaction is measured at the amount of the increase in net assets recognised by the entity. When, as a result of a non-exchange transaction, the entity recognises an asset, it also recognises revenue equivalent to the amount of the asset measured at its fair value as at the date of acquisition, unless it is also required to recognise a liability. Where a liability is required to be recognised it will be measured as the best estimate of the amount required to settle the obligation at the reporting date, and the amount of the increase in net assets, if any, recognised as revenue. When a liability is subsequently reduced, because the taxable event occurs or a condition is satisfied, the amount of the reduction in the liability is recognised as revenue.

Taxes (Property rates)

The entity recognises an asset in respect of taxes when the taxable event occurs and the asset recognition criteria are met. Resources arising from taxes satisfy the definition of an asset when the entity controls the resources as a result of a past event (the taxable event) and expects to receive future economic benefits or service potential from those resources. Resources arising from taxes satisfy the criteria for recognition as an asset when it is probable that the inflow of resources will occur and their fair value can be reliably measured. The degree of probability attached to the inflow of resources is determined on the basis of evidence available at the time of initial recognition, which includes, but is not limited to, disclosure of the taxable event by the taxpayer.

The entity analyses the taxation laws to determine what the taxable events are for the various taxes levied.

The taxable event for property tax is the passing of the date on which the tax is levied, or the period for which the tax is levied, if the tax is levied on a periodic basis. Taxation revenue is determined at a gross amount. It is not reduced for expenses paid through the tax system.

Transfers, including Grants and Receipts

The entity recognises an asset in respect of transfers when the transferred resources meet the definition of an asset and satisfy the criteria for recognition as an asset. Transferred assets are measured at their fair value as at the date of acquisition.

Fines

Fines are recognised as revenue when the receivable meets the definition of an asset and satisfies the criteria for recognition as an asset. Assets arising from fines are measured at the best estimate of the inflow of resources to the entity.

Bequests

Bequests that satisfy the definition of an asset are recognised as assets and revenue when it is probable that the future economic benefits or service potential will flow to the entity, and the fair value of the assets can be measured reliably.

Gifts and donations, including goods in-kind

Gifts and donations, including goods in kind, are recognised as assets and revenue when it is probable that the future economic benefits or service potential will flow to the entity and the fair value of the assets can be measured reliably.

Services in-kind

Except for financial guarantee contracts, the entity recognises services in-kind that are significant to its operations and/or service delivery objective as assets and recognise the related revenue when it is probable that the future economic benefits or service potential will flow to the entity and the fair value of the assets can be measured reliably. If the services in-kind are not significant to the entity's operations and/or service delivery objectives and/or do not satisfy the criteria for recognition, the entity disclose the nature and type of services in-kind received during the reporting period.

1.16 LEASES

A lease is classified as a finance lease if it transfers substantially all the risks and rewards incidental to ownership. A lease is classified as an operating lease if it does not transfer substantially all the risks and rewards incidental to ownership.

When a lease includes both land and buildings elements, the entity assesses the classification of each element separately.

Finance leases - Lessee

Finance leases are recognised as assets and liabilities in the statement of financial position at amounts equal to the fair value of the leased property or, if lower, the present value of the minimum lease payments. The corresponding liability to the lessor is included in the statement of financial position as a finance lease obligation.

The discount rate used in calculating the present value of the minimum lease payments is the interest rate implicit in the lease.

Minimum lease payments are apportioned between the finance charge and reduction of the outstanding liability. The finance charge is allocated to each period during the lease term so as to produce a constant periodic rate of on the remaining balance of the liability.

Any contingent rents are expensed in the period in which they are incurred.

Operating leases – lessor

Operating lease revenue is recognised as revenue on a straight-line basis over the lease term.

Initial direct costs incurred in negotiating and arranging operating leases are added to the carrying amount of the leased asset and recognised as an expense over the lease term on the same basis as the lease revenue.

The aggregate cost of incentives is recognised as a reduction of rental revenue over the lease term on a straight-line basis.

The aggregate benefit of incentives is recognised as a reduction of rental expense over the lease term on a straight-line basis.

Income for leases is disclosed under revenue in statement of financial performance.

Operating leases – lessee

Operating lease payments are recognised as an expense on a straight-line basis over the lease term. The difference between the amounts recognised as an expense and the contractual payments are recognised as an operating lease asset or liability.

1.17 BORROWING COSTS

Borrowing costs are interest and other expenses incurred by an entity in connection with the borrowing of funds.

Borrowing costs are recognised as an expense in the period in which they are incurred.

Change in accounting policy due to amendments to GRAP 5 – Borrowing costs

The adoption of amendments to GRAP 5 – Borrowing costs resulted in a change in accounting policy during the current period. The effect of the change is that borrowing costs are now expensed when incurred, and this change is applied prospectively since 2014/07/01. The effective date of the amendments was 2014/07/01.

Borrowing costs, incurred both before and after the effective date of this amendment, and related to qualifying assets for which the commencement date for capitalisation is prior to the effective date of this standard, is recognised in accordance with the entity's previous accounting policy.

1.18 VALUE ADDED TAX

The Entity accounts for value-added tax (VAT) on the payment basis.

1.19 UNAUTHORISED EXPENDITURE

Unauthorised expenditure is expenditure that has not been budgeted for, expenditure that is not in terms of the conditions of an allocation received from another sphere of government, entity or organ of state and expenditure in the form of a grant that is not permitted in terms of the Municipal Finance Management Act (Act No.56 of 2003). Unauthorised expenditure is accounted for as an expense in the Statement of Financial Performance and where recovered, it is subsequently accounted for as revenue in the Statement of Financial Performance.

1.20 FRUITLESS AND WASTEFUL EXPENDITURE

Fruitless and wasteful expenditure is expenditure that was made in vain and would have been avoided had reasonable care been exercised. Fruitless and wasteful expenditure is accounted for as expenditure in the Statement of Financial Performance and where recovered, it is subsequently accounted for as revenue in the Statement of Financial Performance.

1.21 IRREGULAR EXPENDITURE

Irregular expenditure is expenditure that is contrary to the Municipal Finance Management Act (Act No.56 of 2003), the Municipal Systems Act (Act No.32 of 2000), and the Public Office Bearers Act (Act No. 20 of 1998) or is in contravention of the entity's supply chain management policy. Irregular expenditure excludes unauthorised expenditure. Irregular expenditure is accounted for as expenditure in the Statement of Financial Performance and where recovered, it is subsequently accounted for as revenue in the Statement of Financial Performance.

1.22 INTERNAL RESERVES

Included in the accumulated surplus are internal reserves, no separate line items are presented, in accordance with the GRAP reporting framework, but provision is made in the budget process for funding of these reserve. The amounts set aside for these reserves are invested in accordance with the investment policy of the entity. The following internal reserves are maintained:

Capital replacement reserve (CRR)

The reserve is created for the replacement of service delivery assets when they reach the end of their economic lives to ensure continue of provision of such services, and to minimise the impact of raising external funding or over reliance on grant funds.

Self-insurance Reserve

A Self Insurance Reserve was established for a self-insurance purpose and to minimize the external insurance costs. The reserve is based on recognised insurance industry principles to complement the external cover provided by insurance companies.

Sinking Funds Reserve

The reserve is created for the provision of repayments of long-term borrowing raised to funds capital projects, and to meet repayment conditions on such borrowings.

1.23 BUDGET INFORMATION

The approved budget is prepared in accordance with GRAP standards on an accrual basis, and are consistent with accounting policies as adopted by the Council for the preparation of this financial statements, and presented by economic classification linked to performance outcome objectives.

The approved budget covers the fiscal period from 2014/07/01 to 2015/06/30. These figures are those approved by Council both at the beginning and during the year, following a period of consultation with the public as part of the Integrated Development Plan (IDP). The amounts are scheduled as a separate additional financial statement, called the statement of comparison of budget and actual amounts. Explanatory comments to material differences are provided in the notes to the annual financial statements.

1.24 RELATED PARTIES

A related party is a person or an entity with the ability to control or jointly control the other party, or exercise significant influence over the other party, or vice versa, or an entity that is subject to common control, or joint control.

Management are those persons responsible for planning, directing and controlling the activities of the entity, including those charged with the governance of the entity in accordance with legislation, in instances where they are required to perform such functions.

Close members of the family of a person are considered to be those family members who may be expected to influence, or be influenced by, that person in their dealings with the entity.

Control is the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities. Joint control is the agreed sharing of control over an activity by a binding arrangement, and exists only when the strategic financial and operating decisions relating to the activity require the unanimous consent of the parties sharing control (the ventures).

Only transactions with related parties not at arm's length or not in the ordinary course of business are disclosed, except for transactions with controlled entities, which are disclosed in full.

1.25 EVENTS AFTER REPORTING DATE

Events after the reporting date are those events, both favourable and unfavourable, that occur between the reporting date and the date when the financial statements are authorised for issue. Two types of events can be identified:

- those that provide evidence of conditions that existed at the reporting date (adjusting events after the reporting date); and
- those that are indicative of conditions that arose after the reporting date (non-adjusting events after the reporting date).

Reporting date means the date of the last day of the reporting period to which the financial statements relate. The entity adjusts the amounts recognised in its financial statements to reflect adjusting events after the reporting date. The entity does not adjust the amounts recognised in its financial statements to reflect non-adjusting events after the reporting date.

1.26 COMMITMENTS

The entity discloses each class of capital assets (PPE, Investment properties, Intangible assets and Heritage assets) recognised in the financial statements as well as future minimum lease payments under non-cancellable operating leases for each of the following periods:

- Not later than one year,
- Later than one year and not later than five years, and
- Later than five years.

1.27 GOING CONCERN

These annual financial statements have been prepared on a going concern basis.

1.28 COMPARATIVE FIGURES

When the presentation or classification of items in the annual financial statements is amended due to better presentation and/or better understandability and/or comparability and/or due to the implementation of a new or amended standard, prior period comparative amounts are reclassified. Where accounting errors have been identified in the current year, the correction is made retrospectively as far as is practicable, and the prior year comparatives are restated accordingly. Where there has been a change in accounting policy in the current year, the adjustment is made retrospectively as far as is practicable, and the prior year comparatives are restated accordingly.

1.29 TAX

Controlling entity

The Entity is exempt from tax in terms of section 10(1)(c)B(i)(ff) of the Income Tax Act.

Entity

Current tax assets and liabilities

Current tax for current and prior periods is, to the extent unpaid, recognised as a liability. If the amount already paid in respect of current and prior periods exceeds the amount due for those periods, the excess is recognised as an asset.

Current tax liabilities (assets) for the current and prior periods are measured at the amount expected to be paid to (recovered from) the tax authorities, using the tax rates (and tax laws) that have been enacted or substantively enacted by the end of the reporting period.

Deferred tax assets and liabilities

A deferred tax liability is recognised for all taxable temporary differences, except to the extent that the deferred tax liability arises from the initial recognition of an asset or liability in a transaction which at the time of the transaction, affects neither accounting surplus nor taxable profit (tax loss).

A deferred tax asset is recognised for all deductible temporary differences to the extent that it is probable that taxable surplus will be available against which the deductible temporary difference can be utilised. A deferred tax asset is not recognised when it arises from the initial recognition of an asset or liability in a transaction at the time of the transaction, affects neither accounting surplus nor taxable profit (tax loss).

A deferred tax asset is recognised for the carry forward of unused tax losses and unused STC credits to the extent that it is probable that future taxable surplus will be available against which the unused tax losses and unused STC credits can be utilised.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply to the period when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of the reporting period.

Tax expenses

Current tax and deferred taxes are charged or credited to net assets if the tax relates to items that are credited or charged, in the same or a different period, to net assets.

1.30 SHARE PREMIUM

An equity instrument is any contract that evidences a residual interest in the assets of the entity after deducting all of its liabilities.

1.31 RESEARCH AND DEVELOPMENT EXPENDITURE

Research costs are charged against operating surplus as incurred. Development costs are recognised as an expense in the period in which they are incurred unless the following criteria are met:

- The product or process is clearly defined and the costs attributable to the process or product can be separately identified and measured reliably;
- The technical feasibility of the product or process can be demonstrated;
- The existence of a market or, if to be used internally rather than sold, its usefulness to the entity can be demonstrated;
- Adequate resources exist, or their availability can be demonstrated, to complete the project and then market or use the product or process; and
- The asset must be separately identifiable.
