# POLICY FOR CORRECTION OF METER READING AND BILLING DATA

## 1. BACKGROUND

Meter reading and billing errors have occurred in the past and continue to occur due to equipment failure, as well as human error. The main principle in correcting meter readings and billing data is fairness to the customer and to COE.

## 2. METHODOLOGY

Where any meter is found to have ceased to register and to have registered inaccurately then:

- The quantity of electricity consumed at the property is to be paid for by the customer.
  - Payment shall be determined from the date of last accurate reading of the meter prior to its failure to register or becoming faulty.
  - Payment will therefore be up to the time of its repair or replacement and shall be estimated by the HOD: Energy on the following basis:
- (1) Where a meter has ceased to register correctly, the Council must repair or replace the meter as soon as possible.
  - (2) Where a meter has been replaced or repaired in accordance with (1) above or it can be proved to the satisfaction of the Council that a lesser or greater quantity of electricity has been consumed the Council must estimate the quantity of electricity that is to be paid for by the customer. The Council's estimate must be fair and reasonable and be for the period from the date of the last accurate reading of the meter prior to the meter's repair or replacement. It must be based on one or any applicable combination of the following:
    - (a) The average monthly or daily consumption of electricity on the premises served by the meter during the 12 months, or any reasonable lesser representative period, before, or 3 months after the replacement of the meter. If the consumption pattern has changed due to seasonal or production related or any other acceptable reasons during the affected period, the Council may obtain proof, or request proof from the customer as to what has changed during the period and factor in the changes, or
    - (b) the consumption of electricity on the premises for the corresponding months, or partial meter reading periods (inclusive of 30-minute interval values) of corresponding months, of the previous year taking into account seasonal variations or variations in production statistics; or
    - (c) any other technical method, using any combination of any available historical or current data, inclusive of load factor, power factor and diversity based calculations.
    - (d) The decision on the final method(s) applied will be the prerogative of Council.
  - (3) Where a meter or meter installation is proven faulty by a known factor, such as those resulting from an incorrect multiplication ratio, or failed current transformer or voltage transformer, meter test result, and similar, the exact ratio will be determined and applied to readings

to obtain the true value of consumption and the Council must calculate the quantity of electricity that is to be paid by, or credited to, the customer.

- (4) Where a customer requested an adjustment, and it can be proven to the satisfaction of the Council, that the customer was not in occupation of the premises for a part of the period, or the full period, the account will be adjusted in accordance with the period the customer was in occupation.
- (5) Where the Council meter has failed and the customer can produce accurate check meter readings, these readings can be used for the correction provided that the customer meter and the Council meter readings correlates, after the Council meter has been corrected. Compensation for losses in a transformer (MV to LV) can be taken into account if the Council meter and customer meters are installed at different voltage levels.
- (6) The Council shall have the right to replace a faulty meter with any newer technology meter or with a meter standardised in Council's policies.

### 3. COMMUNICATION

3.1 Prior to any adjustments being made to a customer's account:

3.1.1 the customer must be advised by the COE Manager: Revenue Services that an error has been detected with his/her account/meter and that such error is being investigated. Proof of delivery to the customer must be recorded and included in the documents supporting the bill correction report.

3.1.2 a report must be prepared and communicated with the customer for discussion. Such a report must contain sufficient details to enable the customer to submit representations within 21 days, if necessary. If the customer refers the bill correction report to his/her attorneys, the COE legal section must be informed to enable COE to take the required legal action if required.

3.2 should the customer fail to make any representations in the prescribed period, then Council is entitled to adjust the account as per the report referred to in 3.1.2.

3.4 the Council shall consider any representations the customer may make and if satisfied that the submission is relevant, adjust the account appropriately.

### 4. DEVIATIONS

Specific circumstances, requiring a deviation from this policy may be considered by the HOD: Energy. Any deviation must be documented and signed off by the HOD: Energy.
