AVAILABILITY CHARGE

Refers to a monthly charge that the municipality may levy against any property and vacant stand which do not utilize the municipal waste management services, where this service is readily available, and the City has the necessary capacity to provide service to the property. This charge is used to defray the cost of the waste generated by the user; to defray the cost of operations and maintenance of waste disposal facilities; and for the preservation, conservation, sustenance, and enhancement of the environment.

The charges must be based on the minimum services utilised or required by the business for waste collection. The tariff will be based on the different and minimum storage containers used in or by the business.

The different business units or sub-divisions that are situated in a single stand without any registered sectional titles must also be charged an availability charge equivalent to the minimum service utilised or required based on the frequency of the different storage bins or containers that are used in the business. These must include all shopping malls, clustered office complexes or residential and similar areas where there are several independent businesses or subdivided activities conducted in the area. The availability charge will be based on the minimum of the various bulk storage containers per size and frequency in the business.
